

BridgePoint Intelligence + Horizon

Pre-seed / Play Ventures
Fit

BridgePoint is building a U.S.-scale spatial intelligence foundation and a real-world-inspired game universe from the same backend: canonical property identities, parcel boundaries, buildings, terrain, land cover, transportation, addresses, and live environmental intelligence.

169M+	Canonical property identities
56/56	Terrain, surface, transport, building coverage
77M+	Stored parcel boundary geometries in progress
\$1M	Suggested pre-seed raise

What is unique

The defensible layer is not just a game concept. It is the spatial identity graph underneath the game: a machine-readable foundation that can anchor game worlds, insurance/climate analytics, simulation, API licensing, and AI/robotics environments.

Horizon wedge

BridgePoint Horizon is the consumer/game path: a persistent survival and multiplayer universe inspired by real geography, dense city areas, roads, buildings, terrain, hazards, factions, events, NPC missions, and long-running seasonal gameplay.

Play Ventures fit

Play Ventures invests in game studios, playable consumer apps, and B2B/AI infrastructure behind games. BridgePoint sits at that overlap: a game universe with an infrastructure layer that could help other studios and simulations build real-world-scale environments faster.

Current ask

Seeking a \$1M pre-seed/SAFE-style round to finish data materialization, polish the B2B demo and Horizon playable vertical slice, secure legal/provenance audits, strengthen cloud/security, and close early pilots or strategic partnerships.
